G2 Integrated Solutions continues drive toward a “Total Solutions” approach with acquisition of NRG Technologies

HOUSTON, TX - Thursday, June 11, 2015 – G2 Integrated Solutions announced today the acquisition of NRG Technologies, an innovator of process-based asset integrity and risk management services and tools.

“The NRG acquisition completes a key element of our total solutions strategy for asset management,” said Jody Mitchell, President of G2. “I am very excited to have NRG’s President, Mike Gloven, join our senior management team. Mike has been developing solutions for the energy industry’s most complex risk management challenges for many years. Adding NRG’s capabilities to our company is a major step forward in our drive to build an integrated service delivery platform. NRG’s proven technology, coupled with our industry-leading risk assessment and geospatial capabilities, will continue to differentiate G2 from its competitors and enhance our ability to deliver cost effective, vertically integrated solutions to solve our client’s most pressing asset integrity issues.”

NRG President Mike Gloven added, “The partnership with G2 provides a launching pad for our powerful technology across a much broader customer base. Besides 'managing the white space' in the integration of various asset management applications, our solution improves existing processes, procedures, and in-house systems, resulting in more cost-effective pipeline and facility integrity management. The regulatory environment and client's expectations for reducing risk are driving unprecedented demand for traceability management, risk quantification and process assurance – capabilities that are not typically found in existing systems or company practices. The innovative approaches that NRG has developed and deployed, coupled with G2’s depth in integrity management and geospatial services, will allow us to cost-effectively deliver a unique set of vertically integrated solutions for risk management and performance assurance challenges.”

About G2 Integrated Solutions

G2 provides end-to-end solutions that support client programs for managing risk, assuring compliance and optimizing performance. The firm is headquartered in Houston, TX, with offices in Denver, CO, Concord, CA and Angleton, TX. G2 works alongside pipeline operators, utility companies and other energy stakeholders, offering services in a host of disciplines, including; engineering, integrity management, geospatial systems & services, regulatory compliance, field services and the operation of energy assets.
